**Scope :** This test method covers the determination of butadiene-1,3 purity and impurities such as propane, propylene, isobutane, n-butane, butene-1, isobutylene, propadiene, trans-butene-2, cis -butene-2, butadiene-1,2, pentadiene-1,4, and, methyl, dimethyl, ethyl, and vinyl acetylene in polymerization grade butadiene by gas chromatography. Impurities including butadiene dimer, carbonyls, inhibitor, and residue are measured by appropriate ASTM procedures and the results used to normalize the component distribution obtained by chromatography.

 Title : Image quality assurance in X-ray diagnostics - Part 1: General conditions  
 Scope : The standards series ÖNORM S 5240 "Image quality assurance in X-ray diagnostics" is part of the quality assurance in X-ray diagnostics. The objective of the standards series ÖNORM S 5240 is to support the operator and the technical user with suitable testing methods, to sustain the necessary image quality and to recognize deviations respectively, to minimize the patient's exposure to radiation in accordance with the diagnostic question from a technical

point of view.

The application of standards series ÖNORM S 5240 contributes to an accurate running and operating of the diagnostic X-ray department as well as to the prevention of repeated radiography and unnecessary patients's exposure to radiation. The standards series ÖNORM S 5240 implicates image quality assurance in diagnostic X-ray departments starting from the generation of X-rays to image replication.

The present ÖNORM specifies definitions, testing methods and technical and organizational implementation. The following parts describe testing methods and equipment for controlling the limit values (e.g. values of constancy test).

An interlaboratory study was conducted in 2012 (see ASTM RR:D02-1747 for supporting data) involving 11 manual laboratories and 13 automated laboratories, with 15 samples tested in blind duplicate. The automated procedure demonstrated objective rating and superior control and should be considered the preferred approach. The values stated in SI units are to be regarded as standard. No other units of measurement are included in this standard. This standard does not purport to address all of the safety concerns, if any, associated with its use. **Title :** Standard Test Method for Volatile Alcohols in Water by Direct Aqueous-Injection Gas Chromatography  
**Scope :** This test method covers a wide range of alcohols with various structures and boiling points that can be separated and detected quantitatively in water and waste water at a minimum detection limit of approximately 1 mg/L by aqueous-injection gas-liquid chromatography. This test method can also be used to detect other volatile organic compounds qualitatively. Organic acids, amines, and high boiling, highly polar compounds are not readily detectable under this set of conditions.
